ABOUT ME

A Software Engineer who builds scalable systems and integrates AI-driven components into real-world applications, with strengths in API design, system architecture, and performance optimization.

EDUCATION

Adama Science and Technology Univesrity | 2021 - 2026

Software Engineering

I mastered the full software development life cycle, including design, coding, and testing. I developed strong proficiency in core programming languages, data structures, and algorithms through hands-on project work. Additionally, I learned to build scalable database systems and apply Agile methodologies to collaborate effectively within development teams.

WORK EXPERIENCE

Maedot Educational Technology | 2024 - 2025

2 Years Intern

- Developed and optimized digital learning applications by writing clean, efficient code for responsive user features.
- Collaborated with cross-functional engineering teams using Agile methodologies to debug issues and improve system performance.
- Bridged academic software engineering concepts with industry practice to enhance overall application user experience.

SKILLS

- Cloud Computing
- AI & Machine Learning Integration
- DevOps & CI/CD
- Full-Stack Web Development
- API Design & Integration
- Database Management
- Agile/Scrum Methodologies
- Data Structures & Algorithms
- Cybersecurity Best Practices
- Mobile App Development
- Version Control (GitHub)
- Automated Testing & QA
